PROFESSIONAL SUMMARY

IFS Cloud Technical Consultant and Software Engineer with over 5 years of experience delivering ERP solutions across implementations, integrations, and customizations. I focus on translating complex business requirements into practical technical solutions, reducing manual effort and helping businesses get the most out of their IFS investment. I have experience leading within cross-functional teams, from defining project estimations to mentoring on code standards, and my delivery experience spans clients across Europe, the Middle East, and Asia.

PROFESSIONAL EXPERIENCE

IFS Technical Consultant

Feb 2026 – Present

Trinity Mechanical Services LLC (IFS Client) · Dubai, UAE

- Lead IFS operational report development, working with the client to understand what they need and developing finance and procurement-related reports, such as invoice and purchase order documents, plus enhancements to existing reports. Hands-on with both Report Designer and Report Studio.
- Work closely with the client on configuration decisions, going through each requirement together to figure out whether the standard functionality (or an existing alternative) already covers it before adding something new. Keeps the environment lean and easier to upgrade down the line.
- Build CRIMs based on customer needs, handling everything end to end: configuration, reports, integrations, and modifications. Hands-on experience with Business Process Automation (IFS Workflows).
- Keep up with new IFS releases and stay active in the IFS community, both helping others troubleshoot and picking up new things along the way.

EDUCATION

BSc in Information Technology

Sri Lanka Institute of Information Technology (SLIIT)

Malabe, Sri Lanka · Graduated 2024

CERTIFICATIONS

IFS Certified Practitioner - Integrations Developer (IFS Cloud) ↗

SKILLS

IFS Ecosystem

IFS Cloud · IFS Applications 10 · Configurations · Operational Report Development (Report Designer, Report Studio) · Integrations · Modifications · Business Process

IFS Technical Consultant & Novacura Flow Developer Oct 2022 – Jan 2026

Novacura AB (IFS Partner)

- Supported 3 Nordic IFS Cloud clients across Supply Chain and Manufacturing, handling modifications, configurations, custom reports and integrations based on each customer's specific requirements.
- Worked on the IFS version upgrade from 21R1 to 25R1 (3 months). Used IFS Update Analyser to identify impacted customizations, updated the affected code, and handled post-deployment rebasing to confirm everything worked correctly on the new release.
- Digitalized day-to-day supply chain operations for an IFS Applications 10 client, covering procurement-related tasks (Order Quotation Flow, Purchase Requisition Creation Flow, Purchase Requisition Approval Flow, Purchase Order Flow, Convert Purchase Requisition to Purchase Order, Purchase Order Approval Flow, Manual Supplier Invoice, Manual Supplier Invoice Approval Flow, Register Arrivals Flow) by building task-focused apps on Novacura Flow Classic. This automated manual workflows and cut processing time by around a third. Working through IFS's APIs and procedure calls for every integration gave me solid hands-on knowledge of the IFS codebase.
- Added Document Management Flow to the same solution, so users could view, download, upload, and delete IFS documents (Purchase Requisition, Purchase Order, Manual Supplier Invoice) directly from their apps without logging into the IFS Application.
- Built a centralized Project Management portal on Novacura Portal, integrated with IFS Cloud OData REST services. It pulled project details, activities, and requirements into a single place so PMs could handle daily work from the portal instead of switching between multiple IFS screens, cutting their workload by roughly half.

Software Engineer Intern

Mar 2021 – Sep 2022

Elzian Agro & Kangaroo Cabs

- Built multi-provider social login (Google, Facebook, LinkedIn) so users could sign in with one tap instead of filling out another registration form, making onboarding a lot smoother.
- Built the user registration and login module for a new mobile app from scratch, covering the full authentication flow. Followed company coding standards and passed QA without major rework.
- Added new backend features using Node.js (Express.js) and MongoDB for a live business web app as part of its ongoing modernization.
- Took an active part in Agile retrospectives and stakeholder demos, sharing progress updates and pitching ideas based on what the data showed, some of which fed into later improvements.

Automation (Workflows) · IFS Release & Service Upgrade (Update Analyser) · SCM & HCM modules

Novacura Flow

Flow Classic · Connect · Portal · Flow Studio · REST integrations

PROJECTS

IFS Debug Extension

Personal project · In development

A Chrome extension I built in my spare time that adds a debug side panel to IFS Cloud. Signs in via OAuth through an IAM client and runs entirely on IFS REST services. Includes an API console, a field inspector that shows the real database column and view behind any field on screen, a read-only SQL editor, a network trace that surfaces the PL/SQL error stack behind failed OData calls, and a projection tracer.
